

Triethanolamine Parameter Specifications

Name: Tris(2-Hydroxyethyl) Amine; Triethanolamine

Appearance: Colorless to pale yellow transparent viscous liquid

CAS Number: 102-71-6

Molecular formula: C₆H₁₅NO₃

Molecular weight: 149.1882

Features: When reacting with inorganic or organic acids, salts can be formed

Melting point: 21.2

Flash point: 179°C
